2. The following is an examiner's statement of reasons for allowance: None of the cited prior art appears to either teach or infer the very desirous low levels of volatile components which are formed by the claimed acrylic pressure sensitive adhesives having a specific level of low MW tackifier component. The only relied upon prior art (Barwich et al) that teaches the presence of tackifiers in the adhesive compositions of

Art Unit: 1771

the invention makes no mention whatsoever of their volatility component, either individually or when mixed into the pressure sensitive adhesive. Nor does any of the remaining cited prior art that employs tackifiers together with the adhesive polymer, e.g. JP 8041436 Abstract. It is worthy of mention that EP 0 899 987 discusses the presence of a wide variety of gases emanating from a wide variety of organic compounds including photoactivated acrylic based adhesives, but the reference never expressly mentions pressure sensitive adhesives or tackifiers and is simply seen to be too remote to the claimed invention. The remaining cited prior art also fails to mention or even hint at the claimed limitation involving the desirability of having tackifiers which possess 13 wt% or lower of a component having a MW of 600 or lower, and although it can be argued that it is the low MW component that is most likely to become the volatile component, the fact is that the cited prior art, whether taken individually or in combination, is totally silent regarding the volatiles containing properties of applicants claimed adhesive compositions, tapes and accompanying air conditioner articles having such materials attached thereto.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
